Provision of services to third parties

With the "Toll Manufacturing" line of business, at Morteros Tudela Veguín we make available to third parties our knowledge in the raw material preparation or final product manufacturing processes for different sectors of activity. Taking into account our proven experience and the technology used, at Morteros Tudela Veguín we comply with the most stringent quality guarantees.

## Versatility and efficiency for different sectors of activity

Siderurgy, Metallurgy, the Automotive Industry, the Chemical Industry, Mining, Livestock Farming, Agriculture and others.

Our installation design philosophy allows for the work to be carried out under extremely versatile conditions which, together with a high installed production capacity, puts us in a position to provide our services in extremely varied areas of the industrial sector, regarding the previous conditioning of the raw material, the intermediate processing stages, by-product management, packaging the final product into different formats, etc.

In this way, we offer a complete management service for a wide range of materials, including the collection of material at source, its processing and the delivery of the material at its destination (in bulk or packaged in the agreed format), in accordance with the specifications required, certified by our own laboratories or the corresponding external entity.

## Different services that add value

Although each project requires a specific study which adapts to the particular conditions and requirements, our experience has allowed us to carry out services covering several processing operations.

Milling and classification of solid materials. Several milling and grain-size distribution classification lines allow us to process products with a certain degree of humidity in order to obtain the different fractions.

Drying solid materials. A solid material drying installation allows the humidity to be eliminated or reduced down to the required value in a highly efficient manner.

Special briquette forming. Our prefabricated concrete modular piece manufacturing line has been successfully adapted to handle other materials, which has allowed us to process industrial by-products forming pieces of an adequate size for them to be valued in terms of their reincorporation into the productive process.

Mixing dry materials.

The most advanced sets of dosing and mixing equipment ensure final products with precise compositions are obtained.

Packaging in different formats.

All the materials processed can be packaged and dispatched in different formats:

- Big-Bag FIBC with several capacities.
- Sacks up to 40kg, in bundles of several sizes shrink-wrapped on wooden pallets with phytosanitary treatment or without pallet (palletless).
- Small sizes for DIY, in 2 and 5kg plastic bags.

Mixing liquid products.

Our installations have equipment for storage, transfer and dosing of liquids to several mixing tanks and reactors, allowing us to obtain liquid product and suspensions of different compositions and for different fields of application. This plant has the most advanced process surveillance, safety and control systems, all supervised by an experienced quality control human team.
